## Abstract of JP2001236368

**PROBLEM TO BE SOLVED:** To provide an information communication terminal which can obtain a portal complying with the state where a user is currently placed. **SOLUTION:** The information communication terminal 1 includes a sensor device 11 which detects user context information, a CPU device 13 which generates and sends information including the detected user context information through a radio network device 14 and receives information corresponding to the user context information through the radio network device 14, and a display device 15 which displays the information received through the network device 14. The CPU device 13 receives the information corresponding to the user context information through the radio network device 14, then, the portal complying with the state where the user is currently placed can be obtained.
